

Statistics

Across

3. Asking statistical questions and collecting, organizing, and analyzing data to answer those questions
9. Mathematics dealing with the collection, analysis, interpretation, presentation, and organization of data.
12. one method of collecting information about a group of people by asking them a statistical question.
13. The most frequent value in a set of data.
14. Data which can be classified by a numerical value.
16. A selection from a population.

17. Data which can have values which are represented by decimals or fractions.

18. The middle most value in a set of data.

Down

1. The number of times an item or number occurs in a data set.
2. The mathematical average of data.
4. Data for which each piece of data fits into exactly one of several different groups or categories.
5. A question that can be answered by collecting data and where there will be variability in that data is a _____ question.

6. Data which can only be represented by whole numbers.

7. A characteristic of a sample.

8. An entire set of items from which data can be collected.

10. Characteristics or information, usually numerical, that are collected through observation.

11. A characteristic of a population.

15. The difference (distance) between the least and greatest values in a data set.
