

Statistics Vocabulary

Across

- 3. another name used to describe the "y" variable
- 8. a straight line used to show the general trend of the data on a scatter plot
- 9. Statistical data that compares two variables
- 10. A data point that is significantly different than almost all the other data points
- 11. using given data to estimate the values within the known values

12. another name for the line of best fit

13. An association where the ordered pairs seem to be scattered with no pattern, meaning the x and y variables are not related

14. another name given for the "x" variable

Down

1. Type of association in which the ordered pairs seem to form some type of a curve.

2. a relationship where as one variable increases, the other variable decreases

4. Graphs that display the bivariate data in a coordinate plane. The ordered pairs are the values in the data.

5. using given data to estimate the values beyond the known values

6. type of association where as one variable decreases, the other variable decreases as well

7. Statistical data in one-variable
