

Structural functions organization of the human body

Across

- 5.** What type of secretion of the mammary glands is produced in the female reproductive system?
9. What does the female reproduction system's major function support?
12. What does the cardiovascular system maintain?
16. In the respiratory system, what gets delivered to the blood?
17. What type of protein is produced by the endocrine system that tell cells what to do in order to regulate homeostasis?
20. What system's major function coordinates activities with other organ systems to maintain homeostasis?
21. Connective tissue that connects muscle to bone?

22. What does the muscular system protect?

24. A function of the integumentary system is to regulate what?

Down

- 1.** Another word for the digestive system's major function of eating.
2. What does the skeletal system store?
3. What information does the nervous system interpret?
4. Connective tissue that connects bone to bone?
6. In the respiratory system, by inhaling in CO₂ you are controlling what?
7. What does the integumentary system protect from?
8. What two organs help control blood pressure?

10. Besides regulating homeostasis, what does the endocrine system also regulate?

11. What commands does the nervous system issue?

13. What system's major function clean the system?

14. What would happen to the proteins in your body if acid accumulates too much?

15. The integumentary system can produce what?

18. What does the urinary system store?

19. A muscle cannot contract without being attached to a _____ to provide leverage for movement.

23. What does the skeletal system protect and support?
