

Sustainable Ecosystems

Across

3. Burning fossil fuels can cause a major problem to the environment and cause:
 8. An aquatic ecosystem that has no directional flow
 11. The gaseous layer surrounding the earth
 14. Something important in the production of many internal structures in plants and animals
 16. The maximum population of species that can be supported in an area without causing permanent damage to the environment

Down

1. A group of plants and animals that live in a particular environment
 2. Organisms that are transported from one ecosystem to another and cause harm and destruction
 4. One of the most important limiting factors that control maintaining ecosystem
 5. The variety of different types of species in a community
 6. The sphere where living organisms can be found

7. A special type of organism that breaks down organic matter
 9. A place that provides food, water and shelter for a group of organisms
 10. Non living
 12. Organisms that covert sunlight into energy
 13. Living
 15. An aquatic ecosystem that has a directional flow
