

# Systems of Equations Crossword

## Across

4. A statement that the values of two mathematical expressions are equal
7. A measure of the steepness of a line
8. What is a solution for intersecting lines?
10. In the \_\_\_\_\_ method you add or subtract the equations to get an equation in one variable

11. In the \_\_\_\_\_ method you replace the variable with an expression

12. What is a solution for two lines don't intersect?

## Down

1. A set or collection of equations that you deal with together all at once

2. The point where two lines meet

3. A number placed before the variable in an equation

5. Two lines side by side having the same distance between them continuously

6. A diagram showing the relation between two variables

9. Lines with \_\_\_\_\_ solutions always have the same slope
