

# TAXONOMY

## Across

1. The largest grouping in our current classification system  
 6. The science of naming and classifying organisms  
 10. A standard naming system that identifies organisms with two names.  
 11. A group containing one or more species  
 12. The domain which contains the kingdom Protista

13. A small piece of DNA that replicates separately from the main chromosome.

14. The smallest grouping in our current classification system

15. genetic material which undergoes mutations very quickly

## Down

2. An evolutionary tree which suggests how species are related historically  
 3. A viral disease

4. The outer covering of a virus

5. The evolutionary history for a group of species

7. A virus that is made up of RNA which makes DNA to become a part of the host DNA

8. An infectious particle made only of a piece of DNA or RNA

9. Genetic material transfers between prokaryotes, producing genetic variations
