

TP Menu Crossword

Across

- 5. _____ processes take away geologic features.
- 6. Upward movement of earth's crust
- 9. The deposition of sediment from a river into a body of WATER.
- 11. Sediment is moved around on earth's surface
- 12. Area that sediment is deposited when a river overflows
- 14. Plates colliding at a plate boundary.
- 15. _____ valley caused by glaciers

- 18. Landform caused by increased pressure, folding earth's crust upward
- 19. Particles of sand, stone, soil, etc.
- 20. _____ currents - the circular flow of magma in earth's mantle.

Down

- 1. Slope of a river or stream
- 2. Process of a tectonic plate going under another at a convergent boundary.
- 3. Crustal _____ is any change to earth's crust resulting from plate movement.

- 4. Sediment deposited on LAND.
- 7. Destructive process that displaces rock layers on either side of a crack in the earth's surface.
- 8. Mountain range caused by the collision of the Eurasian Plate and Indian Plate
- 10. Constructive _____ make new landforms (ex. mountains and volcanoes)
- 13. Two plates converging, causing earth's crust to fold over itself.
- 16. A V-shaped _____ is caused by the flow of water
- 17. Increased pressure causes earth's crust to fold upward.
