

# Testing Methods/ Biohazard Information

## Across

2. help diagnose Ebola. Was used with Musoke for Marburg, Boniface for Ebola Sudan, and Mayinga for Ebola Zaire
5. extremely hot lethal zone
6. a potential hazard to human health or the environment from biological substances especially microorganisms
8. checks for inflammation or dysfunction of liver to find diagnosis for the virus

9. beneficial for diagnosing Ebola because it replicates the virus cells
10. provides a constant supply of decon tools
11. area where the normal world and hot zone meet
12. scientists get exposed to this to prevent viruses leaving the hot zone in the gray area
13. prevents virus infected air from leaving the hot zone

## Down

1. innermost layer of clothing when going into a hot zone
3. helps screenshot viruses in the perfect magnification that you can diagnose it
4. outer most layer of clothing when going into a hot zone and contains up to three hours of oxygen supply
7. an extremely lethal biohazard virus area
