

The Battery

Across

1. What compound is usually an acid or base
 4. Chemical oxidation occurs and it _____ electrons
 8. Has a positive terminal
 11. Difference in charge between the cathode and anode

12. Electrolyte is a paste-like mixture

Down

2. Electrons flow from the _____ to positive electrode
 3. When the reaction reacts it causes one electrode to lose electrons and develop a _____ charge

5. Has a negative terminal

6. Measures the amount of potential difference
 7. Electrolyte is a liquid
 9. The electrolyte reacts oppositely with the two different _____
 10. Chemical reaction occurs and it _____ electrons
