

# The Cell

**Across**

- 5. Makes protein.
- 6. The outer layer of the cell (only found in plant cells).
- 9. The jelly-like fluid that fills a cell.
- 10. The "brain" of the cell.
- 11. An organism with a membrane-bound nucleus.
- 12. Performs cellular respiration so the cell can breathe.

13. A structure inside a living cell.

14. Protects cell from its surroundings.

**Down**

- 1. Conducts photosynthesis.
- 2. A network of membranes found throughout the cell, and is usually connected to the nucleus.

- 3. A single-celled organism without a membrane-bound nucleus.
- 4. The things that make up all living things.
- 7. Packs and sorts proteins.
- 8. An organelle in the cytoplasm of a cell.
