

The Central Dogma

Across

3. It is where proteins are synthesized

7. In this process, the two strands of the double helix complement each other, the sequence of the bases from one strand will determine the bases of the other

9. It helps glue DNA fragments

10. It is the process of making proteins

Down

1. It replicates DNA molecules

2. It is the first step in protein synthesis

4. It carries the genetic information encoded in the DNA into the cytoplasm

5. It binds the amino acids

6. It is the final step in protein synthesis

8. It carries an amino acid
