

The Hydrologic Cycle

Across

- 2.** The river, lake, and stream transport of water to the oceans
- 5.** Water taken from the groundwater flow and soil moisture
- 7.** The change of state from water to water vapor
- 8.** The process where ice and snow changes into water vapor without going through the liquid phase
- 9.** Occurs when there is excessive precipitation and the ground is saturated

10. The movement of solid, liquid and gaseous water through the atmosphere

11. Evaporation of liquid water from plants and trees into the atmosphere

Down

- 1.** Water that falls to the earth
- 3.** The movement of water into the ground from the surface
- 4.** When water vapor changes into ice without going through the liquid phase
- 6.** The conversion of vapor or gas into liquid
