# The Processing Cycle

- |   |                     |
|---|---------------------|
| 1. An opening in a computer   | A. output           |
| 2. A collection of tiny wires through which data is transmitted from one part of the computer to another                                | B. impact printer   |
| 3. Enables a user to enter data and programs into a computer system   | C. foot mouse       |
| 4. Can capture images of people, scenery, documents, and product records in a form that can be entered and stored by a computer         | D. System unit      |
| 5. The most common type of hard copy output device  | E. Page scanner     |
| 6. A hard copy output device used to output special kinds of hard copy including architectural drawings                                 | F. handheld scanner |
| 7. Is a nonimpact printer that produces output of exceptional quality using a technology similar to that of photocopy machines          | G. input device     |
| 8. Is a nonimpact printer that form images by spraying thousands of tiny droplets electrically charged ink onto a page                  | H. touch screen     |
| 9. Processed data usually text, graphics, or sound that can be used immediately or stored in a computer usable form for later use       | I. motherboard      |
| 10. Uses a variety of different technologies that allow them to be smaller thinner and lighter so they can be used with small computers | J. graphics tablet  |
| 11. This printer prints much like a typewriter , by striking an inked ribbon against the paper  | K. cache memory     |
| 12. Are used for scanning small or curved areas   | L. PC card          |
| 13. This scanner looks similar to table copy machines   | M. laser printer    |
| 14. Is a flat tablet used together with a penlike stylus or a crosshair cursor  | N. ROM              |
| 15. Allows the user to choose options by pressing a finger  | O. plotter          |
| 16. Allows people with carpal tunnel syndrome or other hand or wrist injuries to use a computer   | P. expansion slot   |
| 17. The most common input device  | Q. keyboard         |
| 18. A type Expansion board  | R. digital camera   |

- |  |                        |
|--|------------------------|
| 19. Is an holding area in which the data and instructions most recently called from RAM  | S. RAM                 |
| 20. This contains instructions , information , or data placed on the chip by the manufacturer  | T. flat panel displays |
| 21. Is a plug in slot on a computer to which you can connect a device  | U. bus                 |
| 22. This port connects a monitor and may be built into the computer or provided by a video card  | V. port                |
| 23. Also called main memory consists of a group electronic chips inside the system unit used to programs while they are being executed | W. printer             |
| 24. A thin sheet sheet of fiberglass or other material with electrical pathways  | X. hardware            |
| 25. The main part of a personal computer   | Y. video port          |
| 26. Refers to all of the physical devices or equipment you can see that make up a computerized system                                  | Z. ink jet printer     |
