

The Rock Cycle

Across

2. the slow downhill movement of regolith and soil
 4. when part of a rock is removed or added
 9. combination of minerals and organic matter
 11. large piles of rock that were loose and tumbled
 12. the movement of regolith, soil and rock

13. what the soil looks like or how you would describe it

Down

1. when something breaks a rock into smaller pieces without changing the rocks mineral composition
 3. when water freezes, expands and enlarges cracks
 5. the layer of rock and mineral fragments that covers almost all of earth's surface

6. when a lot of rocks rapidly go down a hill or mountain
 7. quickly moving soil, rocks and water going downhill
 8. type of weathering caused by reducing pressure on a rock surface
 10. downward slipping of rock on a curved surface
