

The Scientific Method

Across

- 4. A procedure carried out to gather data and observation
- 6. Statement telling your results based on data and observation
- 8. An educated guess
- 10. Using your senses and tools to gather information
- 11. Helps to measure data

Down

- 1. The questions you will base your investigation on
- 2. Showing your results to other scientists
- 3. Process scientists use to help answer questions
- 5. Careful study of results
- 7. Observations and facts from the experiment
- 9. Plan your experiment, including the materials you will need
