

# The Skeletal System

## **Across**

**4.** A type of connective tissue that is more flexible than bone

**10.** A joint that allows forward and backward motion

**11.** This bone has many small spaces within it and is lightweight but strong

**12.** Complex living structures that undergo growth and development

**13.** The Greek word meaning "a dried body." The framework of your body.

**14.** Bones in movable joints are held together by this strong connective tissue

## **Down**

**1.** A place in the body where two bones come together

**2.** Beneath the bone's outer membrane is a layer of what, which is hard and dense, but not solid?

**3.** This joint allows greatest range of motion

**5.** This joint allows one bone to rotate around another

**6.** A condition in which the body's bones become weak and break easily.

**7.** This joint allows one bone to slide over the other

**8.** This bone has many small spaces within it and is lightweight but strong

**9.** This bone has many small spaces within it and is lightweight but strong
