# The living world: Biodiversity matching game

- |   |                           |
|---|---------------------------|
| 1. What may cause primary succession?   | A. Monocultures           |
| 2. What does NOT cause Colony Collapse Disorder?  | B. Volcanic Eruptions     |
| 3. Which is an invasive species?  | C. Ecotone                |
| 4. What is a region of transition between two biological communities?   | D. Zebra mussel           |
| 5. What are changes in population or community structures that occur at the boundary of two or more habitats? | E. The Birds of Paradise  |
| 6. The largest threat to species is...  | F. Habitat Fragmentation  |
| 7. The emergence of discontinuities in an organism's environment that causes population fragmentation is...   | G. Habitat Loss           |
| 8. What is the ongoing extinction of individual species due to environmental factors such as climate change?  | H. Edge Effect            |
| 9. Endemic species include...   | I. The American Alligator |
| 10. Keystone species include...   | J. Background Extinction  |
