# The processing cycle

- |  |                           |
|--|---------------------------|
| 1. is the hardware component that processes information  | A. system unit            |
| 2. is a thin sheet of fiberglass   | B. digital                |
| 3. the pace of the microprocessor's internal clock   | C. carpal tunnel syndrome |
| 4. the connection between a user and software  | D. interface              |
| 5. a graphic symbol that represents a software program   | E. resolution             |
| 6. the condition of weakness, pain , or numbness   | F. icon                   |
| 7. the smallest picture element that a computer monitor or other device can display              | G. motherboard            |
| 8. a measurement of the sharpness of an image displayed on a computer monitor                    | H. pixel                  |
| 9. a collection of information data about a subject that is organized in categories              | I. database               |
| 10. continuous, not broken into bits; said of telephone signals                                  | J. read-only memory       |
| 11. composed of separate bits  | K. address                |
| 12. a rectangular arrangement of elements into a rows and columns                                | L. matrix                 |
| 13. the number or bit pattern that identifies a file and a specific location on a storage medium | M. analog                 |
| 14. storage of data that is capable of being accessed  | N. clock speed            |
