

The rock Cycle

Across

3. Igneous rocks formed slowly, inside the earth's crust are known as what?

8. One property of sedimentary rock is that it absorbs water. This means it is?

10. Igneous rocks are hard to damage because they are?

12. Igneous rocks are the only rocks to contain what?

13. What type of rock is made formed at high pressure and high temperature?

14. the sediments will stop moving and settle at the bottom of the ocean. this process is known as?

Down

1. Freeze-thaw weathering is an example of which type of weathering?

2. What type of rock contains crystals?

4. This process moves sediments from their original place.

5. What type of weathering is caused by tree roots?

6. Igneous rocks formed quickly outside of the Earth's crust are known as?

7. Both sedimentary rocks and metamorphic rocks can contain?

9. What process squeezes the layers of sediment together?

11. What is the name of the molten rock?
