

Topic 15: Comparing Two Populations

Across

4. Divides the data set into four parts with the same number of data values in each part.
5. The difference between the greatest and the least values in a data set.
8. How spread out the data set is.
9. The data measure of range and interquartile range.
10. Values that are far away from the main set of data.

Down

1. An inference that compares two things.
2. The difference between the first and third quartiles of the data set.
3. The data values of the mean and median.
6. The middle value of a data set when the values are arranged in numerical order.
7. The sum of the data divided by the number of data values.
