

# Types of Cells

## Across

2. power source of a cell
3. large organelle in a eukaryotic cell
7. organelles in plant and algae cells in which photosynthesis take place
9. system of folded membranes
12. organelles that contain digestive enzymes

13. organisms made of eukaryotic cells
14. helps bacterium move
15. protective barrier that encloses a cell
16. move a protist forward by beating back and forth

## Down

1. a structure that perform a function within a cell
4. organelles that make protein

5. single- celled organism that do not have a nucleus or membrane- bound organelle
6. packages and distributes proteins
8. small unit that can perform a process for life
10. a gel like substance
11. outermost structure that gives support to a cell

## Word Bank

- |                       |              |               |               |
|-----------------------|--------------|---------------|---------------|
| cell wall             | eukaryote    | cell membrane | golgi complex |
| flagellum             | mitochondria | cilia         | lysosome      |
| endoplasmic reticulum | cytoplasm    | organelle     | ribosome      |
| chloroplast           | prokaryote   | nucleus       | cell          |
