

Types of Coastal Landforms

Across

- 3.** A natural arch, natural bridge or, less commonly, a rock arch is a natural rock formation where an arch has formed with an opening underneath.
- 5.** A partially enclosed coastal body of brackish water with one or more rivers or streams flowing into it, and with a free connection to the open sea.
- 9.** Area of high land on the coastline, often with cliff faces

- 10.** An accumulation of loose material deposited on the shore by wave action and longshore drift. It may be fine silt, sand or coarse shingle material
- 12.** small land features, isolated by water, lying off the shore of a larger island
- 14.** A curved recess in the line of the coastline larger than a cove but smaller than a gulf
- 15.** A shallow coastal waterway totally or partially closed off from the open ocean by a reef or sandbar

Down

- 1.** An island that is largely or completely made of sand.

- 2.** A small rocky island close to the coastline
- 4.** Cliff beside the sea
- 6.** A ridge of sand accumulated by the wind action that can vary in size
- 7.** An isolated piece of coastline in the ocean that was previously attached to the mainland
- 8.** A natural cavity, void or chamber near or under the earth's surface
- 11.** A spit that links an offshore island to the mainland, often caused by longshore drift
- 13.** A narrow point of land projecting into the sea
