

Types of Kinetic and Potential Energy

Across

- 6. Energy associated with the motion or position of an object.
- 7. Energy that travels by waves or particles.
- 8. Energy stored in bonds of chemical compounds.
- 10. Energy a body possesses by movement.

Down

- 1. Energy an object has based on its position.

- 2. Energy associated with the vibration of matter.
- 3. Energy from moving charged particles.
- 4. Stored energy of an object based on its position on the ground.
- 5. The internal energy of an object due to the kinetic energy of its atoms/molecules.
- 9. Type of energy stored in an object that changes shape.
