

UNIT 1 MODULE 5: SOUNDS

Across

- 5. The distance between two identical peaks in a wave
- 6. Carrier of a wave from one location to another (can be a solid, liquid or gas)
- 7. The back and forth movement of the particles of a medium
- 8. This tells us how loud the sound is
- 9. A vibration travelling in a medium

- 10. The unit used to measure the intensity of sound

Down

- 1. A disturbance that travels energy through matter or space
- 2. Sound waves are _____ waves
- 3. Space in which there is no matter
- 4. This refers to how many waves are there in a second
