

Unit 10: Personality

Across

- 5. A personality test, such as the Rorschach or TAT, that provides ambiguous stimuli designed to trigger projection of one's inner dynamics.
- 7. Views behavior as influenced by the interaction between people's traits (including their thinking) and their social context.
- 8. A characteristic pattern of behavior or a disposition to feel and act, as assessed by self-report inventories and peer reports.
- 9. The childhood stages of development (oral, anal, phallic, latency, genital) during which, according to Freud, the id's pleasure-seeking energies focus on distinct erogenous zones.

- 10. All our thoughts and feelings about ourselves, in answer to the question, "Who am I?"
- 11. The perception that you control your own fate.
- 12. One's feelings of high or low self-worth.
- 13. A test (such as the MMPI) developed by testing a pool of items and then selecting those that discriminate between groups.
- 14. A readiness to perceive oneself favorably.
- 15. A theory of death related anxiety; explores people's emotional and behavioral responses to reminders of their impending death.

Down

- 1. The extent to which people perceive control over their environment rather than feeling helpless.
- 2. An individual's characteristic pattern of thinking, feeling, and acting.
- 3. Carl Jung's concept of a shared, inherited reservoir of memory traces from our species' history.
- 4. The interacting influences of behavior, internal cognition, and environment.
- 6. In contemporary psychology, assumed to be the center of personality, the organizer of our thoughts, feelings, and actions.
