

# Unit 1 Biology Vocabulary

**Across**

- 1. Make own food through photosynthesis/chemosynthesis
- 3. biological/living components
- 4. produce their own food (also called producers)
- 12. non-biological/non-living components
- 13. eat other organisms for food (also called consumers)

- 14. large areas containing several small living systems within a shared region
- 15. Eat (consume) primary producers, also called herbivores
- 16. eat leftovers or droppings from other organisms (also called decomposers)
- 17. comprised of air

**Down**

- 2. Eat other animals
- 5. comprised of soil
- 6. Eat both plant and animal material

- 7. all of Earth makes up the
- 8. the relationships between organisms and their physical environment
- 9. comprised of water
- 10. A group of interdependent organisms of different species growing or living together in a specified habitat
- 11. the study of living organisms and the way they interact with their physical environment
