

# Unit 1, Chapter 1

**Across**

- 2. in an experiment, the variable that is measured
- 4. a subset of a population being studied
- 8. the view that psychology should be a science that studies behavior without reference to mental processes
- 9. a research study in which the mathematical relationship between two variables is examined

- 10. information given to participants in a study after they have completed their participation, including the study's purpose and any deceptions
- 11. in an experiment, the process of placing participants in groups by chance
- 13. a testable prediction
- 14. in an experiment, the variable that is manipulated

**Down**

- 1. the tendency to believe, after learning an outcome, that one would have foreseen it
- 3. the study of the relative power and limits of genetic and environmental influences on behavior
- 5. in an experiment, the group not exposed to the treatment
- 6. repeating a research study to see whether the basic finding can be reproduced
- 7. the theoretical perspective in psychology that emphasizes human growth potential
- 12. a research method in which one individual or group is studied in depth
