

Unit 2: Co

Across

11. The theoretical maximum population that a given environment could support

12. Operates more strongly on large, dense populations than on smaller ones

Down

1. The capability of a natural system to apply self; predictable changes in population growth

2. Aspects of the environment that limit the size of a population can reach

3. Regulates population growth regardless of its size or density

4. Measures the number of individual organisms living in a defined space

5. Population grows without limit

6. Population grows quickly at first and then levels off

7. Relating to or resulting from living things, especially in their ecological relations

8. The migration of human(s) to a country that is not a native to it in order to settle there

9. Leaving of a certain place with the intent of living in another place

10. Physical rather than biological; not derived from living organisms
