

Unit 2 Vocabulary

Across

3. the common endpoint of the ray of an angle.
 5. point or value that marks the end of a ray or a line segment or interval.
 8. lines that lie on the same plane
 12. A location.
 16. A part of a line with one end point that goes in one direction that doesn't end.
 19. Pair of adjacent, supplementary angles
 21. Unit squares covering the surface of a closed figure.
 22. A line that splits an angle into two equal angles.
 25. Either of two angle whose sum is 90
 27. A line, ray, or segment that divides into two congruent segments

28. angle of which measure 90

29. lines that intersect to form right angles.

30. points that lie on the same line

Down

1. angles that measure more that 90 but less that 180.
 2. A part of a of a figure cut off by a line or plane intersecting it.
 4. A line perpendicular to a segment at its midpoint.
 6. Angles that have the same degrees or radians.
 7. either of two angles whose sum is 180.
 9. angle that measure 180
 10. three or more points that line on the same plane

11. line segments that are equal in lenght.

13. angle that have a common side and vertex

14. lines in a plane that don't meet.

15. A continuous line forming the boundary of a closed geometric figure.

17. Angles that opposite each other when two lines cross.

18. A straight line which has no endpoint.

20. two rays with the same endpoint.

23. A flat surface on which a flat line join on any two points.

24. Angle which measures between 0 and 90

26. point that divides a segment into two congruent segment.
