

# Unit 7 Vocabulary

**Across**

- 3. Energy that doesn't replenish for thousands of years.
- 8. Dams can harness my renewable, cheap energy. But I am expensive to build.
- 9. I am a fossil fuel mostly used on farms and backyard grills. I am a clean burner and turn into liquid when under pressure.
- 11. I am a clean burning fossil fuel moved by pipeline. I have no color, no taste, and no smell.

- 12. I look like shiny black rock mostly found in the United States and I pollute the air when burned.

**Down**

- 1. Photovoltaic cells can turn my almost unlimited energy into electricity.
- 2. Energy that replenishes in a short time.
- 4. I am a fossil fuel made into lots of things—like gasoline and plastics. I pollute the air when burned.

- 5. I make energy from moving air.
- 6. I am renewable heat energy from inside the Earth.
- 7. My renewable energy is stored in trees, plants, and garbage, but I also pollute the air when burned.
- 10. My uranium is buried underground and burns cleanly, but my waste is radioactive.
