

# Unit 7

## Across

2. in danger of extinction throughout a significant portion of its range  
 3. helpful for predicting a population's future growth  
 7. nonliving components of an area  
 8. a biome dominated by grasses and scattered trees  
 10. food-obtaining behavior  
 13. regular back and forth movement of animals between two areas  
 15. the conversion of semiarid regions to desert

16. an interaction in which one species kills and eats another  
 17. environmental factors that restrict population growth  
 19. continuously frozen subsoil  
 20. number of individuals of a species per unit area or volume

## Down

1. what enables an animal to find particular foods efficiently  
 4. the way individuals are spaced within their area  
 5. a series of reciprocal evolutionary adaptations in two species

6. the maximum population size that a particular environment can sustain  
 9. an area of calm or of very light winds  
 11. all living organisms in the area  
 12. regions surrounding the equator  
 14. river-like flow patterns in the oceans  
 18. a network of interconnecting food chains
