

# Vocab app.

## Across

6. The length (distance) of an arc. Inches, feet, yards.
8. Distance around a two dimensional shape, or the measurement of the distance around something; the length of the boundary
10. An arc that is intercepted by the end points of an angle.
11. The measure (degrees) of an arc.

12. An angle whose vertex is the center of the circle
13. A figure or shape that can be divided into more than one of the basic figures.

## Down

1. Distance around a circle
2. A line segment from the center to the midpoint of one of its sides.
3. The area enclosed by a central angle and its intercepted arc.

4. An angle with all end points on the circle
5. A polygon that is equiangular (all angles are equal in measure) and equilateral (all sides have the same length)
7. A line segment whose end point are on the circle.
9. A piece of length that's on the outside of the circle
