

Vocabulary Exercises

Across

- 7. n infective agent that typically consists of a nucleic acid molecule in a protein coat, is too small to be seen by light microscopy, and is able to multiply only within the living cells of a host.
- 9. Cell that does not have a nucleus or other membrane-bound organelles.
- 10. Theory that states that all organisms are made of cells, all cells are produced by other living cells, and Cell is the most basic unit of life.

- 11. Membrane-bound structure that is specialized to perform a distinct process within a cell.
- 12. Organism that is within the kingdom Bacteria.

Down

- 1. Method by which molecules are moved in and out of the cell.
- 2. Eukaryote that is not an animal, plant or fungus.
- 3. Activities occurring at the cell level.
- 4. Regulation and maintenance of constant internal conditions in an organism.
- 5. Cell that has a nucleus and other membrane-bound Organelles.
- 6. Molecules that forms the double layered cell membrane; consisting of a glycerol, phosphate group and two fatty acids.
- 8. Basic unit of life
