

Vocabulary Study

Across

6. a wide, sloping deposit of sediment formed where a stream leaves a mountain range
 8. a small depression that forms when a chunk of ice is left in glacial till
 10. a loop like bend in the course of a river
 11. a meander cut off from a river
 12. A landform made of sediment that is deposited where a river flows into an ocean or lake

13. water that fills the cracks and spaces in underground soil and rock layers

15. a long, narrow glacier that forms when snow and ice build up in a mountain valley

Down

1. the process by which a glacier picks up rocks as it flows over the land
 2. a large channel in soil that carries runoff after rainstorm
 3. a column like form that grows upwards from the floor of a cavern

4. any one of several processes by which gravity moves sediment downhill
 5. Any large mass or ice that moves slowly over land
 7. a channel through which water is continually flowing downhill
 9. water that flows over the ground surface rather than soaking into the ground
 14. a tiny groove in soil made by flowing water
