

# Water Biology Vocabulary

## Across

1. The expression of intermolecular attraction at the surface of an liquid.

9. A weak bond between two molecules resulting from electrostatic attraction.

10. Chemical compound added to a solution to determine the PH

11. The nucleus of a hydrogen atom separated from its accompanying electron.

12. Negative charge -2

13. The tendency of a fluid to be raised or suppressed in a metal tube.

14. Joining of two different substances due to attractive forces that hold them

## Down

2. The presence of or having distinct and opposite poles

3. Positively charged +1

4. How neutral the PH is

5. Chemical substance consisting of 2 hydrogens and 1 oxygen

6. Body maintains stability in internal environment.

7. Sticking together of alike molecules

8. A negatively charged molecule made of one hydrogen and one oxygen.
