

Name: _____

Water Cycle/Weather

Across

2. A boundary separating two masses of air of different densities, and is the principal cause of meteorological phenomena outside the tropics.

5. A body of air with horizontally uniform temperature, humidity, and pressure.

6. An instrument for measuring the speed of the wind, or of any current of gas.

9. The cycle of processes by which water circulates between the earth's oceans, atmosphere, and land.

11. The process of turning from liquid into vapor.

12. The state of the atmosphere, describing for example the degree to which it is hot or cold.

Down

1. Rain, snow, sleet, or hail that falls to the ground.

3. Water that collects as droplets on a cold surface when humid air is in contact with it.

4. An instrument measuring atmospheric pressure, used especially in forecasting the weather and determining altitude.

7. Water held underground in the soil or in pores and crevices in rock.

8. Leave or escape from a place, person, or situation of danger.

10. The statistics of weather over long periods of time.
