

Water and our world

Across

3. a landform created when the end of a river meets a lake or sea and deposits a lot of sediment

4. When water molecules cling to one another

8. A Narrow waterway that connects two larger bodies of water

12. to protect something from harm, contamination, or unnecessary waste

13. A very Large piece of Ice floating in the ocean or sea

15. An area of land covered by a shallow amount of water or containing extremely soggy soil

16. the force that holds a liquids outer surface together

Down

1. The measurement of salt content in a given body of water

2. when rocks, soil, and sediments are deposited in a new location

5. how closely the molecules compact in a given substance

6. water molecules cling well to many other substances

7. a large mass of ice that covers an area of land and moves very slowly downhill

9. The cycle of the rising and lowering of the ocean water level in a specific area

10. the process in which a gas becomes a liquid

11. The carrying away of rocks and soil by wind, water, or ice

14. a large body of water that is surrounded by land on three sides with an open waterway son the fourth side
