

Water cycle Vocabulary

Across

3. A characteristics of materials such as clay and granite through which water does not pass easily
4. An ecosystem where all water runoff drains into a single body of water
5. What are least as vapor from plants into the air
10. A flow of groundwater water that emerges naturally as a ground surface
11. A layer of permeable rock or soil in which the cracks and paws are completely filled with water
15. The continuous process by which water moves from earth surface to the atmosphere and back
18. Place where an organism lives and depends on food to survive
19. Allowing liquids to pass or diffuse through
20. A body of rocks or sediment the stores groundwater
21. The process by which water molecules in liquid water escape into the air as water vapor

22. High Point or Village that determines the direction river flows

23. Pleasant discharge from a single identifiable location

25. A way of supplying water to an area of land that doesn't pass through

26. A harmful chemical or waste material discharged into the water soil or air

27. The process by which water on the ground surface enters the soil

28. Any physical or chemical change and service water or ground water that can harm living organisms make water unfit for certain useAny physical or chemical change and service water or ground water that can harm living organisms make water unfit for certain uses

Down

1. A well in which water rises because of pressure within the aquifer

2. A land area that is covered with a shallow layer of water doing some or all of the year

6. The practice of using less of resources so that it will not be used up too much

7. What is that fills the cracks and spaces in underground soil and rock layers

8. A layer of rocks and soil above the white table in which the poison container as well as water

9. The process by which molecules of water vapor in the air becomes liquid water

12. A lake that stores water for human use

13. A river or stream that flows into a larger river

14. A fountain of water and stream that builds up pressure underground and erupts as regular intervals

16. A widely spread source of pollution that is difficult to link to specific point of origin

17. Any form of water that falls from clouds and reaches earth surface

24. The upper level of the saturated zone of groundwater
