

# Water pollution

## Across

4. The process that water goes through to make it fit to drink.
7. Farmers use these to kill insects on crops and this can pollute the water supply.
8. A serious waterborne disease.
9. A substance or material that causes pollution.
10. These pollutants dissolve in water.

## Down

1. These living germs cause waterborne diseases.
2. This causes pollution when people throw their rubbish in the street.
3. We are destroying this by polluting our water sources.
5. These are pollutants that do not dissolve in water.
6. We use these in our homes and they can pollute the water supply.
