# Weaning Procedures

## **Across**

- 3.** Commonly used in mechanically ventilated patients, "vacation"
- 5.** Best measurement of ventilation
- 8.** We must do this with every patient we are weaning
- 10.** Normal value is 5-8cmH20 or less

**12.** A common cause for weaning failure, "plugging"

## **Down**

- 1.** This is a decreases amount of oxygen to a certain area
- 2.** Ventilatory support for lengthy periods
- 4.** This determines which patients are ready to be removed from ventilatory support
- 6.** A good candidate might be a post-op patient for this trial
- 7.** Uses PIP and PEEP to support patient breaths
- 9.** Newer technique for weaning, combines advantages of pressure control and volume control modes
- 11.** Least effective method of weaning
