

Weather

Across

5. when water vapor enters the atmosphere
 6. overflowing of water in a normally dry area
 7. heat circulating due to differences in density
 11. pressure caused by the weight of air pushing down on an area
 15. the gases that surround the Earth
 16. violent disturbance in the atmosphere
 17. boundary where air masses meet
 18. localized storm often accompanied by heavy precipitation and lightning

20. any form of water that falls from clouds

21. water that sweeps across the coast during a storm or hurricane

22. the distance above sea level

Down

1. fast spinning column of air extending from a thunderstorm that forms where hot and cold air masses meet

2. happens at night when land cools off faster than water

3. measure of the amount of water vapor in the air

4. movement of air parallel to the surface of the Earth

8. when water vapor turns into a liquid

9. storm with wind speeds greater than 74 mph that usually forms over the water

10. scientist that predicts weather

12. high speed winds located 6 to 14 km above the surface of Earth that helps when predicting weather

13. huge body of air that has similar temperature, humidity and air pressure. determined by where it forms

14. happens during the day when land heats up faster than water

19. a long period with little or no rain
