

Weathering & Erosion

Across

- 1.** Water that soaks deep into soil and rock
- 6.** Cone shaped calcite deposit suspended from the ceiling of a cavern
- 7.** Place where eroded particles are deposited up along the land
- 8.** Process that breaks down rock into smaller pieces

- 10.** Water that flows over the surface of the earth into rivers and lakes
- 11.** Process of transporting weathered material by natural agents
- 12.** Weathered rock and decayed organic material

Down

- 2.** Curving swells of water caused by wind, tides, and earthquakes

- 3.** Circular depressions caused when the roof of a cavern collapses
- 4.** Cone shaped calcite deposit built up from the floor of a cavern
- 5.** Process of laying the weathered material down in a new location
- 9.** Moving air
