

Windmill Vocabulary

Across

5. the cause of rotation based on the force x distance

9. the conversion of energy from one form to another form

10. a push or pull

11. the central component connecting the blades to the driveshaft

Down

1. the dangerous area directly in line with the rotor

2. the rod or shaft that rotates with the rotor

3. the amount of energy produced based on the amount of wind

4. the force that resists the relative motion of two objects in contact

6. the angle of the blades

7. the friction of the blades against air molecules known as wind resistance

8. the section that rotates made up of blades
