

cellular respiration review

Across

- 1. The organelle that cellular respiration takes place in
- 4. What "picks-up" the electrons at the end of the Electron Transport Chain
- 5. Reactant of glycolysis
- 7. Electron carrier in cellular respiration
- 9. Hydrogen ions move through this protein by facilitated diffusion to produce cellular energy

- 10. A waste product that is produced in the Krebs cycle

Down

- 2. Where does glycolysis take place
- 3. The product of glycolysis to goes to the Krebs cycle
- 6. The membrane the electron transport chain is located
- 8. Where the low concentration of hydrogen ions are located
