# destructive forces and constructive forces

## Across

4. Melted rock that is beneath the Earth's surface.

6. Deep valleys with steep sides

8. A crack in the Earth's crust.

10. Processes that build things

12. An area of new land at the mouth of a river, formed from sediments carried by the river

14. A mountain that forms as molten rock flows through a crack on Earth's surface.

15. The process of wearing away rocks by natural means

## Down

1. The shaking of Earth's surface, caused by movement of rock in the crust.

2. Natural forces that break down the Earth

3. A large hole formed when the roof of a cave collapses

5. A natural land shape or feature

7. A section of the Earth's crust and mantle fits together with other sections like puzzle pieces.

9. Molten rock that flows from a volcano onto Earth's surface.

11. A sand hill that is made and shaped by wind

13. The process of moving sediment by wind, moving water, or ice.
