geometry terms

Across

1. Consists of two or more rays with a common endpoint
3. A line that divides something into two equal parts
6. A logical argument in which a statement is supported by fact
7. A point that divides a segment into two congruent segments
9. The segments joining a point
13. Half of a diameter
14. The circumference of any circle divided by it's diameter
15. Part of a line, it consists of an endpoint and all points of a line on one side of the endpoint
16. An angle measuring less then 90 degrees
17. A figure with five sides
19. A figure with three sides
20. Part of a line bounded by two endpoints

Down

2. Defined to be true whenever both parts have the same true value
4. An angle greater then 90 degrees
5. The area around a circle
8. Three or more points on a straight line
10. A figure with four equal sides
11. A flat two dimensional figure
12. A figure with no angles
18. Number of square units that a shape encloses
