

geometry vocab

Across

3. the end of a line segment
 5. a middle point on a line segment
 6. a location (dot) on a line
 8. has no thickness, is straight, and is infinite in both directions
 10. a figure formed by 2 rays
 11. 2 angles with a sum of 180°

12. a line that of which is infinite on one side and has a end point on the other
 14. 2 angles with a common side, a common vertex, and don't overlap
 15. adjacent angles formed when two lines intersect

Down

1. 3 or more points on the same line
 2. 2 angles with a sum of 90°

4. a pair of opposite angles made by two intersecting lines
 7. a line with 2 end points (not infinite)
 9. 3 or more points on the same plane
 13. a flat, two-dimensional surface that extends infinitely far
