

# intro psychology vocab words

## Across

3. can be achieved by putting all the names in a hat and picking out a specific number of names, by alphabetizing the roster of enrollees and choosing every fifth name, or by using a table of random numbers to choose participants

7. The clues participants discover about the purpose of the study, including rumors they hear about the study suggesting how they should respond

10. The factor the researchers manipulate

11. The imitation pill, injection, patch, or other treatment

13. provides a way of statistically combining the results of individual research studies to reach an overall conclusion

14. a measure of the likelihood that the difference between groups results from a real difference between the two groups rather than from chance alone

## Down

1. describes the specific procedure used to determine the presence of a variable

2. consistency or repeatability

4. Differences between the experimental group and the control group other than those resulting from the independent variable

5. indicate the degree to which scores differ from each other and vary around the mean value for the set

6. the behavior or mental process that is being measured, the factor that may change as a result of manipulation of the independent variable

8. a research design in which the participants don't know which treatment group—experimental or control—they are in

9. The strength and direction of correlations can be illustrated graphically in this type of graph

12. the extent to which an instrument measures or predicts what it is supposed to
