# kobe stuff

## Across

- 3. A similar feature of another (angle, shape, or side)
- 5. similarity between side, angle, and a side
- 12. a straight line touching the edge of a curve
- 15. A trigonometric function referring to a formula (opposite/hypotenuse)
- 16. A perpendicular line toward the an incidence line
- 17. the line that connects to other angle in a right triangle

19. can represent any angle measure

20. two lines crossed by a single line

## Down

- 1. pairs made by two intersecting lines
- 2. forms when two sides of a triangle are corresponding
- 4. if the identified angle in a triangle is 45, it is a
- 6. the opposite of alternate Exterior angles
- 7. two angles that contain relative position to one another

8. the longest part of a right triangle

9. if at least one side of the triangle is 30 its a

10. an angle with a reflected ray

11. the side opposite from hypotenuse

13. equal ratio of an acute angle and an adjacent

14. two figure with the same shape

18. a line from one point to another
