

minerals

Across

- 3. what is it when sediments get pushed down and exposed to heat and pressure?
- 5. what is it when compress+ squeeze?
- 8. what is it when dropping sediments?
- 11. what occurs when compacted sediments stick together and turns into rock?
- 14. what is it when liquid->solid (coals)
- 16. what is it when solid-> liquid
- 17. this is all about the_____cycle

- 18. what is formed deep underground where heat and pressure causes existing rocks to be changed?
 - 19. what is it when earths rocks change from one type into another over time
 - 20. what is it when the unique combination of solid elements and compounds that make up a mineral
- Down**
- 1. what is it when earths party molten, allowing dense metal to sink to the core?
 - 2. what is formed when lava cools and solidifies?
 - 4. what is it when molten rock of magma that has reached the earths surface?

- 6. what is it when breaking down of rocks?
- 7. what is it when squeeze together?
- 9. what occurs when rock particles are pressed together or packed down by gravity?
- 10. what is it when the moving rock sediments?
- 12. what is it when it is melted or molten rock material under the earths surface ?
- 13. what is it when a naturally occurring inorganic solid with a fairly constant chemical?
- 15. what is formed when particles of other rocks are deposited in layers and are compacted and cemented together?
